Abstract:

Agriculture, industry, and services have been very important sub-sectors of economies in the World. Currently most countries' economy based open on agriculture or agricultural economics. Getting economies from agricultural economics to bio economics and circular economics creates added values. Also circular economics is valuable for environmental sustainability too. The objective of this study is to contribute sustainable development in the World. Giving some examples of getting economies moving from agricultural economics to bio economics and circular economics will be best practices for development countries as know-how. and benchmark.
